

Bahawal Khan

AI/ML Engineer | Generative AI | Agentic AI | BSCS Undergraduate

Lahore, Pakistan | 0335-2691598 | khanbahawal2004@gmail.com

PROFESSIONAL SUMMARY

Computer Science undergraduate at the University of Lahore, currently in the 7th semester with a CGPA of 3.06/4.00, focused on AI/ML engineering and the development of modern AI-powered applications. Technical focus spans classical machine learning, deep learning, generative AI, large language models, retrieval-augmented generation (RAG), and agentic AI. Hands-on experience includes building LLM-integrated applications using LangChain and LangGraph, designing agent workflows with tool calling, and working with FastAPI and PostgreSQL for backend systems. Also familiar with React.js and Next.js for AI application interfaces and full-stack integration.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

2023 - Present

University of Lahore, Lahore, Pakistan

Current Standing: 7th Semester | **CGPA:** 3.06 / 4.00

TECHNICAL SKILLS

Programming: Python, C++, JavaScript, HTML5, CSS3

Machine Learning: Exploratory Data Analysis (EDA), Feature Engineering, Data Cleaning, Model Training, Model Evaluation, Model Deployment, Scikit-learn, NumPy, Pandas, Matplotlib

Deep Learning: Artificial Neural Networks (ANN), Convolutional Neural Networks (CNN), Recurrent Neural Networks (RNN), LSTM, GRU, Transformers, Large Language Models (LLMs), TensorFlow, Keras

Generative AI: LangChain, Retrieval-Augmented Generation (RAG), Retrievers, Vector Stores, Embeddings, Chains, LLM-based Applications

Agentic AI: LangGraph, Agent Workflow Design, AI Agents, Tool Calling

Open-Source & LLM APIs: Hugging Face Open-Source Models, LLM-based APIs

Backend & Databases: FastAPI, PostgreSQL, MySQL, SQL, Database Design, Database Queries, Joins

Web Development: HTML5, CSS3, JavaScript, React.js, Next.js

Development Tools: Git, GitHub, Visual Studio Code, Microsoft Office

CORE AI/ML AREAS

Machine Learning: Data preparation, exploratory analysis, feature engineering, model training, evaluation, and deployment using Python-based ML tooling.

Deep Learning: Neural-network architectures including ANN, CNN, RNN, LSTM and GRU, with exposure to Transformers and large language models.

Generative & Agentic AI: RAG pipelines, embeddings, retrievers, vector stores, LangChain components, LangGraph agent workflows, and tool-calling based AI agents.

AI Application Development: FastAPI backend development, PostgreSQL/MySQL databases, LLM API integration, and React.js/Next.js interfaces for AI-powered applications.
